INTRODUCTION

This report presents data from the 1971 Census on the number of persons ever married according to age at first marriage, with additional classifications by age groups and sex. Data are provided for urban, rural non-farm and rural farm areas, for Canada and the provinces.

The following definitions are relevant to this report:

Persons ever married: Includes all persons 15 years and over who reported themselves as now married, widowed, divorced or separated.

Age: Refers to completed years of age at last birthday prior to June 1, 1971. Respondents were asked to report their month and year of birth. This was converted by mechanical means to age at last birthday.

Age at first marriage: This question was not asked directly of respondents, but was derived by mechanical means from answers given to the questions on date of birth and date of first marriage.

Definitions of geographic terms (e.g., urban, rural, farm population) can be supplied on request. They also appear in most reports of earlier issues of the Volume I series.

The information in this report was collected on a 33 1/3% sample basis. As a result, the population for a given geographic area may differ from that shown in reports containing data collected on a 100 p.c. basis. *The latter figures, of course, represent the official population counts (see Catalogue Nos. 92-704 to 92-707).*

Ce bulletin présente les données du recensement de 1971 concernant les personnes non célibataires classées selon l'âge au premier mariage et selon le groupe d'âge et le sexe. Les données visent les régions urbaines et les régions rurales non agricoles et rurales agricoles, pour le Canada et les provinces.

Voici la définition de certains termes utilisés dans le présent bulletin:

Personnes non célibataires: Toutes les personnes de 15 ans et plus qui ont donné leur état matrimonial comme "marié", "veuf", "divorcé" ou "séparé".

Âge: Nombre d'années révolues, au dernier anniversaire avant le 1^{er} juin 1971, jour du recensement. Les recensés devaient indiquer le mois et l'année de leur naissance; une simple opération mécanique a ensuite permis de fixer l'âge au dernier anniversaire.

Âge au premier mariage: On n'a pas posé cette question directement aux recensés, mais on a établi l'âge au premier mariage en faisant un rapprochement mécanique entre la date du premier mariage et la date de naissance.

Les définitions des termes géographiques (par ex. régions urbaines, régions rurales, population agricole) peuvent être obtenues sur demande. Elles figurent également dans la plupart des bulletins déjà publiés du volume I.

Les renseignements de la présente publication ont été recueillis par un échantillonnage de 33 1/3 %. Il s'ensuit que les chiffres de population pour une région géographique donnée ne sont pas forcément les mêmes que ceux des publications dont les données avaient été recueillies à 100 p. 100. *Bien entendu, c'est ce dernier chiffre qui représente le dénombrement officiel de la population (voir les publications nos 92-704 à 92-707 au catalogue).*

The 1971 Census figures in this report have been subjected to a confidentiality procedure to prevent the possibility of associating small figures with any identifiable individual. The particular technique used is known as "random rounding". Under this method, all last or "unit" digits in a table (including all totals) are randomly rounded (either up or down) to "0" or "5". This technique provides the strongest possible protection against direct, residual, or negative disclosures without adding any significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Similarly percentages, which are calculated on rounded figures, do not necessarily add to the total. Also, minor differences can be expected for corresponding totals and cell values in various census reports.

The estimates of the mean square error for the characteristics covered in this report were not available at the time of publication. They will be available in the introductory report to this volume (Catalogue No. 92-741). Those users requiring this information prior to the release of the introductory report should contact the Census User Inquiry Service.

Par souci de confidentialité, les chiffres de 1971 publiés ici ont été soumis à une formule qui garantit l'impossibilité d'associer des chiffres de faible importance à une personne reconnaissable. Cette technique particulière s'appelle l'"arrondissement aléatoire". Grâce à cette méthode, tous les derniers chiffres, c'est-à-dire les chiffres des unités, des tableaux (y compris tous les totaux) sont arrondis de façon aléatoire (vers le haut ou vers le bas) à "0" ou à "5". Cette technique assure la protection maximale contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Toutefois, puisque les totaux sont arrondis séparément, ils ne sont pas nécessairement égaux à la somme des chiffres individuels arrondis dans les distributions. De même, la somme des pourcentages calculés à partir de chiffres arrondis ne correspond pas forcément au total. Aussi, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences.

Les estimations de l'erreur quadratique moyenne des caractéristiques données dans ce bulletin n'étaient pas disponibles au moment de la publication. Elles seront disponibles dans le rapport introductoire de ce volume (n° 92-741 au catalogue). Les utilisateurs demandant ce renseignement avant la publication du rapport introductoire devraient s'adresser au Service-utilisateurs, Recensement.

A standard User's Request Form on which to outline precise tabulation requirements and to request time and cost estimates may be obtained from the User Inquiry Service of the Census Division of Statistics Canada.

Maps and geographic files

Large-scale maps may be purchased to show the boundaries of enumeration areas (i.e., the territory covered by each Census Representative in taking the census), as well as small-scale maps of census divisions and other statistical areas. Supporting documentation relating to the census geographic files (i.e., place names, codes, etc.) are available in tabular form identifying the component enumeration areas of administrative and statistical units (e.g., towns, villages, municipalities, tracts).
